

STAFF CONSOLE

# Hospital CRM User Guide

Step-by-step instructions for adding, viewing, editing and deleting records across every module — from patient registration to billing and insurance.

[Logins](#) · [First-time setup](#) · [Patient journey](#) · [Billing](#) · [Roles & permissions](#)

## 1. Log in

Open `http://localhost:8000/login` in your browser, enter the email and password, and press **Sign in**.

| Role                                 | Email                                                            | Password |
|--------------------------------------|------------------------------------------------------------------|----------|
| <b>Super Admin</b> (sees every menu) | admin@gmail.com                                                  | password |
| Doctor                               | ananya.rao@hospital-crm.test<br>karan.malhotra@hospital-crm.test | password |
| Nurse                                | kavita.joshi@hospital-crm.test                                   | password |
| Receptionist                         | rohan.desai@hospital-crm.test                                    | password |
| Pharmacist                           | meera.iyer@hospital-crm.test                                     | password |
| Lab Technician                       | suresh.pillai@hospital-crm.test                                  | password |
| Accountant                           | anita.kapoor@hospital-crm.test                                   | password |

**Change the passwords** before using the system with real patient data. Each role only sees the menus it has permission for, so different logins show different sidebars.

## 2. The menu (left sidebar)

| Group                  | Menus                                                             |
|------------------------|-------------------------------------------------------------------|
| Front Office           | Patients, Appointments                                            |
| Clinical               | OPD & Consultations, IPD & Beds, Nursing, Emergency, OT / Surgery |
| Pharmacy & Diagnostics | Pharmacy, Laboratory, Radiology                                   |
| Finance                | Billing, Insurance                                                |
| Operations             | Inventory, Documents                                              |
| Insights               | Reports, Notifications, Audit Logs                                |
| Administration         | Users & Roles                                                     |

## 3. First-time setup (do once, in this order)

- Staff** — **Users & Roles** → **+ New User**. Enter name, email and password, choose a role (for example Doctor) and Save. Doctors must exist before you can book appointments or write prescriptions.
- Beds** — **IPD & Beds** → **Wards, Rooms & Beds**. Click **+ Ward**, then **+ Room**, then **+ Bed**.
- Medicines and stock** — **Pharmacy** → **Medicines** → **+ New Medicine**; then **Suppliers** → **+ New Supplier**; then **Purchases** → **+ New Purchase** to add stock. A medicine has zero stock until a

purchase is recorded.

4. **Test lists** — in **Laboratory** and **Radiology**, click **+ Add Test Type** to create the tests doctors can order.
5. **Insurance companies** — added from the **Insurance** → **+ New Policy** form.

## 4. Add a patient & see all their details

### Add a patient

1. Go to **Patients** and click **+ New Patient**.
2. Fill in the first name and mobile number (both required), plus date of birth, gender, blood group, allergies, address, emergency contact and insurance if known.
3. Click **Save**. The patient gets an MRN number automatically (for example MRN000021).

### Where to see the complete patient

1. Go to **Patients** and search by name, MRN or mobile number.
2. Click the patient's **MRN** link. This opens the **Patient 360°** page showing the profile, allergies and blood group, then cards and tables for:
  - Appointments, OPD visits, consultations, diagnoses
  - Prescriptions, pharmacy sales, lab orders, radiology orders
  - Admissions, bills, payments, insurance policies, documents
3. Click **Complete Report** on that page for the printable full medical and billing history.

### Edit or delete

- **Edit**: click **Edit** on the patient row or on the patient page, change the fields and Save.
- **Delete**: click **Delete** on the patients list and confirm. The patient is hidden from the lists rather than wiped, so their records stay intact.

Roles without the 360 permission (for example receptionist and nurse) see the patient's profile only, with a note that clinical history is restricted. Doctors and admin see everything.

## 5. Typical patient journey

### Outpatient (OPD) visit

1. **Appointments** → **+ New Appointment**. Pick the patient, doctor and time. On the list you can **Check-in**, **Reschedule** or **Cancel** an appointment. Rescheduling cancels the old appointment and creates a new one.
2. **OPD & Consultations** → **+ New OPD Visit**. Enter symptoms and vitals (pulse, blood pressure, temperature, SpO2).

3. In the same section add **+ New Consultation**, **+ New Diagnosis** and **+ New Prescription**. For a prescription, pick the patient and doctor, click **+ Add medicine**, and set dosage, frequency, duration and quantity.
4. **Laboratory** → **+ New Lab Order** and **Radiology** → **+ New Radiology Order**. Open the order to collect the sample, start processing, enter results and approve. Radiology orders are scheduled, reported and approved the same way.
5. **Pharmacy** → **Sales** → **+ New Sale**. Stock is taken from the batch that expires first. Open the sale and click **Generate Bill**. A sale can also be partly returned.

### Admitted (IPD) patient

1. **IPD & Beds** → **New Admission**. Choose the patient, doctor and an available bed. A patient who is already admitted cannot be admitted again until discharged.
2. **Nursing**: **Record Vitals**, **Add Note** and **Record Administration** (medicine given).
3. Open the admission and use **Transfer Bed**, then **Discharge** (with a discharge summary). After discharge click **Generate Final Bill**.
4. After a discharge, a bed shows as needing cleaning; mark it cleaned in **Wards, Rooms & Beds** to make it available again.

### Emergency case

1. **Emergency** → **Register Emergency Visit** and enter the chief complaint.
2. Open the visit: click **Triage** (critical, urgent, semi-urgent or non-urgent), then **Start Treatment**.
3. Finish with **Admit** (moves the patient into IPD), **Discharge** or **Refer** to another hospital.

### Surgery

**OT / Surgery** → **Schedule Surgery**. Pick the patient, surgeon, procedure, OT room and time. Then use **Start**, **Complete** or **Cancel**.

## 6. Billing, payments & insurance

1. **Billing** → **+ New Bill**. Pick the patient and bill type, then add line items with **+ Add item**.
2. Open the bill to add more items, add a discount, **Record Payment**, refund a payment, or cancel the bill.
3. **Billing** → **Payments** lists every payment. Payment methods: cash, card, UPI, bank transfer, cheque, insurance, TPA.
4. **Insurance** → **+ New Policy** links a patient to an insurer. Then **Submit Claim** against a bill; a claim is approved, rejected or settled.

## 7. Other modules

| Module        | What you do there                                                                                                                      |
|---------------|----------------------------------------------------------------------------------------------------------------------------------------|
| Inventory     | Add items and reorder levels, record stock in and out, raise purchase orders (mark <i>Ordered</i> , then <i>Received</i> , or cancel). |
| Documents     | <a href="#">+ Upload Document</a> for a patient (PDF, image or Word, up to 10 MB). Download or delete it.                              |
| Reports       | Revenue, bed occupancy, pharmacy stock and lab turnaround.                                                                             |
| Notifications | Alerts for your role; mark one or all as read.                                                                                         |
| Audit Logs    | Who did what and when (admin only, read-only).                                                                                         |
| Users & Roles | Create users, deactivate or reactivate them, create custom roles and choose their permissions.                                         |
| My Profile    | Update your own name and contact details.                                                                                              |

## 8. Add / Edit / Delete cheat sheet

Every module follows the same pattern: a list page with a search box, a [+ New ...](#) button at the top right, and a table. Click a record to open it; use **Edit** in the row or on the record.

| Record                                              | Add                             | Delete / remove                                 |
|-----------------------------------------------------|---------------------------------|-------------------------------------------------|
| Patients                                            | + New Patient                   | Delete button (hidden from lists, history kept) |
| Appointments                                        | + New Appointment               | Cancel, or Delete                               |
| OPD visits, consultations, diagnoses, prescriptions | + New ...                       | Delete button                                   |
| Medicines, suppliers, inventory items               | + New ...                       | Deactivated (kept for history)                  |
| Users                                               | + New User                      | Deactivate / Delete                             |
| Roles                                               | + New Role                      | Delete (built-in roles cannot be deleted)       |
| Bills, payments                                     | + New Bill / Record Payment     | Cancel bill, Refund payment                     |
| Admissions                                          | New Admission                   | Discharge                                       |
| Emergency, OT, orders                               | Register / Schedule / New Order | Discharge, refer or cancel (status change)      |
| Documents                                           | + Upload Document               | Delete button (confirmation)                    |

## 9. Roles & permissions

If you do not see a **+ New**, **Edit** or **Delete** button, your role does not have that permission.

- An admin can change a role's permissions in **Users & Roles** → **Roles** → **Edit**.
- Or give a user a different role in **Users & Roles** → **Users** → **Edit**.

| Role                             | Main areas                                                                                                                                                 |
|----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Doctor                           | Patients (full 360 view), appointments, OPD, consultations, diagnoses, prescriptions, lab and radiology orders, admit / discharge, bed transfer, emergency |
| Nurse                            | Nursing (vitals, notes, medication), IPD view, bed transfer and cleaning, emergency                                                                        |
| Receptionist                     | Patients (add / edit), appointments, OPD visits, billing and payments, documents                                                                           |
| Pharmacist                       | Medicines, purchases, sales, returns, billing their own sales                                                                                              |
| Lab Technician / Radiology Staff | Lab or radiology orders, samples and results                                                                                                               |
| OT Staff                         | Surgery scheduling                                                                                                                                         |
| Billing Staff / Accountant       | Bills, payments, insurance; accountant is view-only plus reports                                                                                           |
| Inventory Manager                | Inventory, suppliers, purchase orders                                                                                                                      |

## 10. Quick tips

- Set up staff, beds, medicines with stock and test lists **first**; most forms need them in their dropdowns.
- Use the search box on every list page to find records fast.
- If a page shows an error or blank data, sign out and sign in again to refresh your permissions.
- Passwords: at least 8 characters. Use **Forgot password?** on the login page to reset.
